ASPIRE SPORTS GROUP

RAFFLE HUB

360° DEVELOPER & ENGINEERING BLUEPRINT

PRODUCT MODEL

Offline/direct payment + immediate ACTIVE digital ticket + later seller reconciliation. The buyer should never feel like they are waiting for Aspire to decide whether their ticket is real.

Texas CREA conservative operating mode

No online raffle ticket checkout. Everything else digital.

Version 1.1 | October 2026 | Developer Build Specification

1. Executive Summary

Purpose: provide a complete implementation source of truth for a low-friction, auditable club raffle system.

Aspire Sports Group will operate the raffle as the legal organization. The platform is designed to keep the raffle sale/payment direct and offline while making ticket issuance, buyer delivery, seller tracking, team progress, reconciliation, reminders, drawing administration and reporting digital.

CORE EXPERIENCE

Buyer hands payment directly to an authorized seller -> seller taps PAYMENT RECEIVED - ISSUE TICKETS -> buyer receives ACTIVE digital ticket immediately -> Aspire later reconciles the seller funds internally. Ticket validity is not held hostage to back-office reconciliation.

Build objective

- A normal sale should take less than 20 seconds after the seller receives payment.
- Buyer gets an official ACTIVE digital ticket immediately by text/email or on-screen handoff.
- Seller sees exactly what they sold, what they collected, and what they owe Aspire.
- Admin can reconcile hundreds of families without spreadsheets or duplicate entry.
- Only ACTIVE tickets are eligible for the draw; every change has an audit trail.
- No public online raffle-ticket checkout in Texas CREA mode.

What the developer is building

Layer	Primary job
Campaign	Configure dates, price, goals, prizes, rules and status.
Seller	Sell in person/directly, collect cash/check, issue digital tickets, share request link.
Buyer	Receive, store and verify ACTIVE ticket instantly.
Reconciliation	Track seller-collected funds vs funds received by Aspire.
Team/Club	Progress, participation, incentives and outstanding actions.
Drawing	Lock eligible pool, select/record winners, manage claims and prize delivery.
Audit/Compliance	Immutable ticket/event history, required disclosures, role permissions and reports.

2. Legal Operating Assumptions & Guardrails

These are product constraints, not a legal opinion. Final launch should be reviewed by Texas counsel.

The current Texas Attorney General guidance says qualified 501(c) tax-exempt nonprofits in existence for at least three years may conduct charitable raffles, CREA organizations may hold up to four raffles per calendar year, and selling or offering raffle tickets statewide is prohibited; the AG notes that statewide is generally thought to include the Internet. The same guidance lists information that must appear on each ticket and prohibits cash prizes. Source: Texas Office of the Attorney General, Charitable Raffles and Casino/Poker Nights.

CONSERVATIVE PRODUCT POLICY

The platform will deliberately avoid online payment/checkout for raffle tickets. It will also use tangible/noncash prizes by club policy even where a particular noncash instrument might arguably be permissible.

Texas CREA mode - hard product rules

Rule	Implementation
Legal operator	Aspire Sports Group appears on ticket and campaign records.
No online ticket sale	No card/ACH/Stripe/Venmo/PayPal checkout for raffle tickets.
Direct payment	Seller records cash or check only after physically/directly receiving it.
Immediate ticket	Seller confirmation issues ACTIVE digital ticket immediately.
Required ticket disclosures	Organization name, organization/officer address, ticket price, prize descriptions over $10, drawing date.
No cash prize	Campaign prize builder blocks cash. Aspire policy also excludes general-purpose cash-equivalent prize cards.
Raffle count	Admin warns/blocks campaign activation if annual configured raffle count exceeds policy limit.
Prize possession	Admin checklist requires possession/ownership or documented legal alternative before drawing.
Advertising	Public/share pages may promote and collect nonbinding interest; they do not sell, reserve for value, or issue tickets.
Compensation	No sales commissions or compensation logic for raffle conduct in CREA mode.

Legal launch gate

- Counsel confirms Aspire Sports Group qualification and final ticket wording.
- Counsel confirms digital-ticket format and seller-confirmed issuance workflow are acceptable for the intended campaign.
- Campaign address, prize list, drawing location/process and winner/claim rules are approved before activation.
- Any legal uncertainty is resolved by disabling the questionable feature, not by interpreting around it.

3. Product North Star & Non-Negotiables

NORTH STAR

A raffle that feels as easy as a modern checkout to the buyer, even though payment is completed offline/directly.

Principle	What it means in product
Immediate confidence	Buyer receives ACTIVE ticket as soon as seller confirms payment received.
No double entry	If the system already knows player, team, price or ticket number, nobody types it again.
Scan/tap first	Scan when possible. Tap when necessary. Type only when unavoidable.
Separate validity from cash reconciliation	Ticket can be ACTIVE while seller funds are still outstanding to Aspire.
One source of truth	Ticket ledger is canonical. Dashboards derive from ledger/events.
Status clarity	Buyer, seller and admin see different wording appropriate to their job.
Auditability	No destructive edits to sold tickets. Use void/reissue events.
Mobile first	Seller flow must work one-handed at practice, games, work and community events.
Friction budget	No normal sale flow should require more than buyer contact + quantity + payment confirmation.
Safe defaults	Texas CREA mode is selected at campaign level and disables incompatible controls.

4. Roles, Personas & Permissions

Role	Needs	Can do
Buyer	Trust, proof, simple retrieval	Receive/verify ticket, view campaign/prizes, contact Aspire.
Player/Parent Seller	Fast sale, easy tracking	Issue tickets after direct payment, see inventory, share request link, view money due.
Team Manager	Participation visibility	See team progress, nudge families, cannot alter money/tickets unless separately authorized.
Raffle Admin	Operational control	Allocate inventory, reconcile funds, void/reissue, manage buyers, drawing, prizes, reports.
Finance Admin	Money integrity	Reconcile batches, checks/cash, deposits, adjustments, export financial reports.
Director/Super Admin	Governance	Campaign activation/lock, user permissions, compliance settings, final draw authorization.
Auditor/Read-only	Verification	View immutable ledgers, reports and event history; no writes.

Permission model

- Least privilege. A seller may only transact against their assigned inventory/campaign.
- A seller cannot void an ACTIVE ticket. They request correction; admin performs void/reissue.
- Team managers cannot reconcile money unless they also hold Raffle Admin or Finance Admin permission.
- Drawing lock/unlock and winner certification require elevated permission and an audit reason.

5. Canonical End-to-End Workflow

A. Campaign setup

1. Create campaign as DRAFT.
2. Enter ticket price, 30-day start/end dates, drawing date, prizes and club goal.
3. Generate ticket inventory and assign seller allocations.
4. Run compliance checklist.
5. Activate campaign.

B. Direct sale

6. Seller opens Sell Tickets or starts from a ticket request.
7. Buyer provides name + phone/email and quantity.
8. App shows exact total.
9. Buyer gives seller cash or check directly.
10. Seller taps PAYMENT RECEIVED - ISSUE TICKETS.
11. System atomically assigns available ticket numbers and marks them ACTIVE.
12. Buyer receives official digital tickets immediately.
13. Seller liability increases by the face value collected.

C. Reconciliation

14. Seller brings cash/checks to Aspire.
15. Admin opens seller or scans seller QR.
16. System displays expected outstanding amount.
17. Admin records cash/check amount, check count/reference if desired, and deposit/batch reference.
18. Matching amount marks those funds RECONCILED; ticket validity remains unchanged.
19. Exceptions are resolved with explicit adjustment events and notes.

D. Close and draw

20. Sales close. No more ticket issuance.
21. Admin resolves open voids/corrections and reviews unreconciled seller funds.
22. Authorized user locks the drawing pool.
23. Only ACTIVE, non-VOID tickets in the locked pool are eligible.
24. Winner is drawn/recorded and ticket is verified.
25. Prize claim/delivery is tracked to completion.

6. Buyer Experience

BUYER PROMISE

Once the seller confirms that direct payment was received, the buyer sees one clear status: ACTIVE - ENTERED IN DRAWING. No pending-validation anxiety.

Digital ticket contents

Field	Requirement
Brand	Aspire Sports Group + raffle/campaign name
Ticket number	Human-readable unique ID, e.g. ASG26-004821
Status	ACTIVE - Entered in Drawing
Buyer	Name; contact may be masked on public verification
Ticket price	Fixed campaign price
Drawing date	Exact date; time/location if club chooses
Prizes	Required general description for each prize over $10
Organization address	Configured legal/operator address
Seller attribution	Optional buyer-facing label; full seller info remains internal
Issued timestamp	Local date/time
Verification QR	Links to signed/read-only verification page
Support	Aspire contact email/phone

Delivery channels

- On-screen wallet/pass view immediately after sale.
- Email delivery with ticket image/PDF link.
- SMS link if enabled through a compliant messaging provider.
- Buyer lookup/recovery using ticket number + contact verification.

Verification page

QR should resolve to a public read-only endpoint using an opaque verification token, not sequential database ID. Display ticket number, campaign, ACTIVE/VOID status, drawing date and Aspire Sports Group. Mask buyer PII.

6A. Supporter Experience Layer

Product intent

The raffle should feel valuable and legitimate to the buyer even when they do not win. The supporter experience is a reusable layer that can later serve Aspire raffles, calendar campaigns, Sponsor-a-Day and other fundraising programs.

Buyer trust standard

Every buyer-facing touchpoint must consistently show Aspire Sports Group, the campaign name, official ticket number(s), ACTIVE status, drawing date, support contact and a verification action. Avoid internal accounting language such as pending validation, unreconciled or seller liability.

Immediate thank-you experience

After PAYMENT RECEIVED - ISSUE TICKETS succeeds, send the buyer a polished thank-you email and/or SMS immediately. The message includes active ticket numbers, drawing date, prize summary, the player/team supported when appropriate, a Verify Ticket button and a View My Tickets button. Delivery failure never invalidates an issued ACTIVE ticket.

Supporter Wallet

Provide a lightweight buyer wallet that is accessible from the ticket email/SMS using secure contact verification or a signed magic link. The wallet groups all tickets purchased by that supporter for the campaign and shows ACTIVE status, ticket numbers, drawing countdown, prize cards, Aspire impact story, verification links and post-draw outcome.

Campaign impact content

Use the same trust-building pattern as Aspire fundraising pages: explain where support goes and connect the purchase to player development, coaching, equipment, travel/programming or other approved charitable purposes. Content is campaign-configurable and should remain concise.

Post-draw Supporter Thank-You Reward

After the drawing is certified and the campaign enters COMPLETED, every eligible non-winning buyer receives a guaranteed supporter benefit: 25% OFF ASPIRE FAN WEAR. This is presented as a post-campaign thank-you, not as an additional raffle prize or second drawing. Final wording and treatment should be included in launch counsel/compliance review.

Reward eligibility and issuance

Issue one unique single-use reward code per eligible supporter/contact per campaign, not one code per ticket. Default benefit: 25% off Aspire Fan Wear. Eligibility: buyer has at least one ACTIVE non-winning ticket at draw certification, campaign is COMPLETED, buyer is not excluded by an admin compliance rule, and the reward has not already been issued for that buyer/campaign.

Reward code requirements

Code format should be non-guessable or server-generated, e.g. ASG25-7K4M9Q. Store code hash/identifier, campaign, supporter, issued_at, expires_at, status and redemption metadata. Status: ISSUED -> REDEEMED or EXPIRED; REVOKED requires admin reason. Expiration is campaign-configurable; recommended default is 30 days after the drawing.

Buyer post-draw presentation

Do not lead with language such as You Lost. Use: Thank you for supporting Aspire Sports Group. As a thank-you, enjoy 25% off Aspire Fan Wear. Display the unique code, expiration date and CLAIM 25% OFF button. A winning supporter follows the winner/claim flow; admin may configure whether winners also receive the fan-wear thank-you.

Fan-wear commerce handoff

The raffle app does not process the fan-wear purchase itself unless Aspire later integrates the store. The CLAIM 25% OFF action deep-links to the Aspire Fan Wear storefront with the code prefilled when supported. This retail purchase is separate from raffle entry/payment. If the store supports coupon APIs, create/sync the unique code automatically; otherwise support secure CSV/export or pre-generated code inventory.

Reward analytics

Track reward issued, delivery success, wallet viewed, claim-link clicked, redeemed, expired and attributable fan-wear revenue when the store can return redemption data. Admin dashboard should show issue rate, redemption rate, merchandise revenue from supporters and most effective delivery channel.

Supporter privacy and communication

Use buyer contact information only for raffle operations and approved supporter communications consistent with Aspire policy and applicable law. Provide unsubscribe/preferences where required. Public ticket verification must never expose the buyer's full contact information.

Supporter experience design rule

The buyer should leave every interaction with one of three feelings: my ticket is real, I know when the drawing happens, and Aspire appreciated my support.

7. Seller / Parent / Player Experience

Seller home

Card	Shows
My progress	Tickets sold / target; dollars raised.
Inventory	Assigned, active, available, voided.
Money due	Collected by seller minus reconciled with Aspire.
Primary action	SELL TICKETS
Secondary action	SHARE / TICKET REQUEST LINK
Turn-in	Next turn-in instructions/date once campaign schedule is set.

Sell Tickets - target 15 to 20 seconds

Step	UI
1	Buyer name
2	Phone OR email; require at least one delivery method
3	Quantity selector: 1, 2, 3, 5, Custom within inventory
4	Total auto-calculated from campaign price
5	Payment method: Cash / Check
6	Required confirmation checkbox: I have received this payment directly.
7	Gold CTA: PAYMENT RECEIVED - ISSUE TICKETS
8	Success: ticket numbers + Send/Show Ticket

NO UNLIMITED ISSUANCE

Seller can only issue from assigned inventory. At zero available, the sale action changes to Request More Tickets.

Seller correction flow

If a seller makes a mistake after issuance, show Request Correction. Seller selects ticket(s), reason and desired correction. Admin resolves by VOID + optional REISSUE. Never silently edit the original sold ticket.

8. Digital Sharing & Ticket Request Flow

Public/shared pages should generate interest without becoming an online sale. No payment collection, no binding reservation for value, no ticket issuance.

Share page

- Campaign story, prizes, drawing date, ticket price and progress.
- Seller/player/team attribution.
- CTA: I WANT TICKETS / CONTACT SELLER - not Buy Now.
- Buyer submits name, contact and desired quantity as a nonbinding request.
- Seller receives notification and can open the request during direct handoff.

Request states

State	Meaning
NEW	Buyer expressed interest; no ticket and no obligation.
CONTACTED	Seller contacted buyer.
READY_FOR_HANDOFF	Seller/buyer arranged direct payment.
FULFILLED	Seller received payment and issued tickets.
CANCELLED	Buyer/seller cancelled request; no ticket issued.
EXPIRED	Request aged out; no effect on inventory.

LEGAL/UX GUARDRAIL

A request never consumes ticket inventory permanently, never creates an ACTIVE ticket, and never collects payment. The sale occurs only when the authenticated seller confirms direct payment received.

9. Raffle Admin Command Center

Dashboard headline

Metric	Definition
Active ticket sales	Face value of ACTIVE tickets issued.
Collected by Aspire	Funds physically received/reconciled by Aspire.
Seller outstanding	Active ticket value not yet turned in/reconciled.
Tickets active	Eligible before final draw lock.
Participation	Families with at least one ACTIVE ticket sold.
Goal progress	Configurable display basis; admin view shows both sales and reconciled cash.
Days remaining	Campaign end date - current date.
Exceptions	Voids requested, discrepancies, bounced checks, duplicate contacts, inventory shortages.

Admin work queues

- Reconcile money
- Correction requests
- Inventory requests
- Buyer delivery failures
- Outstanding sellers
- Prize readiness
- Drawing readiness

10. Ticket Inventory & Lifecycle

CANONICAL INVENTORY

Pre-generate ticket IDs per campaign. Ticket records are not deleted; state changes are evented and auditable.

Ticket lifecycle

State	Meaning	Eligible for draw?
AVAILABLE	Unassigned campaign inventory.	No
ASSIGNED	Allocated to a seller; not sold.	No
ACTIVE	Direct payment received by seller and ticket issued.	Yes
VOID	Invalidated by authorized admin with reason.	No
WINNER	ACTIVE ticket selected/recorded as winner.	Yes - historical
CLAIMED	Winning prize successfully delivered.	Historical

Separate reconciliation state

State	Meaning
NOT_APPLICABLE	Ticket not yet ACTIVE.
OUTSTANDING	Seller collected payment; Aspire has not reconciled funds.
RECONCILED	Aspire received/reconciled corresponding funds.
EXCEPTION	Funds discrepancy or payment issue under review.
WRITTEN_OFF	Rare director-approved exception with reason and audit trail.

Ticket number format

Recommended: ASG-{YY}-{6 digit sequence}, e.g. ASG-26-004821. Keep a separate UUID primary key. Human ticket number must be unique within campaign and immutable.

11. Money Reconciliation Engine

The platform must model seller custody of funds explicitly. A valid ticket does not mean Aspire has physically received the money yet.

Seller liability

seller_outstanding = sum(face_value of seller ACTIVE tickets) - reconciled_receipts - approved_adjustments

Reconciliation workflow

Field	Notes
Seller	Auto-selected from scan/search.
Expected outstanding	Read-only calculated amount.
Cash received	Admin entry.
Checks received	Amount + optional count/reference.
Batch/deposit ID	Optional but recommended.
Received by	Authenticated admin.
Timestamp	Server generated.
Notes	Required when amount does not equal expected turn-in.
Allocation	Default FIFO across seller ticket obligations; support manual allocation if needed.

Partial turn-in

Partial reconciliation is normal. Seller may turn in $100 of $240 outstanding. System reduces outstanding to $140 without touching ticket ACTIVE status.

Check exception

If a check is returned, create a payment exception. Do not silently void the buyer ticket. Admin follows club policy, documents resolution, and may void/reissue only with authorized rationale.

12. Campaign Configuration & 30-Day Engine

Dates remain TBD. The engine must support any start date, sales-close date and drawing date while making a 30-day campaign easy to configure.

Campaign fields

Field	Type / behavior
Legal operator	Aspire Sports Group - locked for this deployment
Campaign name	Text
Status	DRAFT / READY / ACTIVE / SALES_CLOSED / DRAW_LOCKED / COMPLETED / CANCELLED
Start date/time	Configurable
Sales close	Configurable
Drawing date/time	Configurable
Ticket price	Fixed for campaign after activation
Club goal	Currency
Default family target	Tickets and/or dollars
Seller allocation	Default ticket count
Prizes	Ordered list with value/source/possession status
Contact	Public support contact
Required address	Legal/operator address
Terms/rules	Versioned text snapshot at activation

Suggested 30-day automation template

Relative day	Automation
Day 0	Launch + seller inventory available
Day 3	New seller getting-started reminder if zero sales
Day 7	Week-one progress summary
Day 10	Target reminder based on seller progress
Day 15	Halfway report to teams/admin
Day 21	Final 10-day push
Day 25	Turn-in reminder for meaningful outstanding funds
Day 28	Final sales/turn-in instructions
Day 30	Sales close automatically at configured time
Pre-draw	Readiness checklist until all blocking items resolved

Relative day	Automation
Post-draw	Winner/claim notifications and campaign closeout

13. Prize Management

Prize record

Field	Purpose
Prize ID	Immutable internal ID
Name / description	Buyer-facing
Fair value	Operational/compliance record
Source	PURCHASED / DONATED
Donor/sponsor	Optional
Possession status	NOT_CONFIRMED / IN_POSSESSION / OWNED / LEGAL_ALTERNATIVE_DOCUMENTED
Rank / draw order	1st, 2nd, etc.
Winner	Linked after draw
Claim deadline	Configured by club policy
Delivery status	PENDING / CONTACTED / CLAIMED / FORFEITED
Proof	Optional delivery acknowledgment/photo/document

ASPIRE POLICY

For this campaign architecture, do not configure cash prizes. Aspire also chooses not to use a $1,000 general-purpose gift card; focus on tangible prizes/experiences.

14. Drawing Engine & Closeout

Pre-draw readiness

Check	Block draw?
Sales closed	Yes
Ticket issuance stopped	Yes
No duplicate ticket numbers	Yes
No unresolved ACTIVE/VOID conflicts	Yes
Prize readiness complete	Yes
Required campaign disclosures locked	Yes
Unreconciled seller money	Warning by default; director policy may decide whether it blocks
Delivery failures	Warning if buyer contact missing, but ticket can remain eligible if legally valid
Audit export generated	Recommended

Draw modes

- Preferred v1: System creates immutable eligible ticket pool and cryptographically records its hash/snapshot. Authorized users conduct draw using approved random selection or physical method, then record selected ticket number.
- Optional v1 digital draw: server-side CSPRNG selection from locked eligible pool, with two-admin confirmation and immutable event receipt. Obtain legal approval before using as final drawing method.

Winner record

- Ticket number, buyer, seller/team, prize, draw timestamp, drawn by, method, verification status.
- Winner contact attempts and claim/delivery state.
- Public winner display should be privacy-conscious and configurable.

15. Notification & Messaging System

Audience	Trigger	Message goal
Buyer	Ticket issued	Your ticket is ACTIVE; show ticket/verification link.
Buyer	Ticket voided/reissued	Explain clearly and provide replacement/support.
Seller	Sale complete	Tickets issued; amount now due to Aspire.
Seller	Low inventory	Request more tickets.
Seller	Outstanding funds threshold/date	Turn-in reminder with exact amount.
Seller	Target reached	Celebrate; no redundant sales nag.
Team manager	Team summary	Who is active / who needs support.
Admin	Reconciliation discrepancy	Action required.
Admin	Draw readiness issue	Blocking checklist item.
Winner	Winner recorded	Claim instructions after manual confirmation/approval.

Message intelligence rules

- Do not send a turn-in reminder to a fully reconciled seller.
- Do not send a zero-sales reminder to a seller who has pending requests or active sales.
- Throttle reminders and provide campaign-specific quiet hours.
- Every automated message links directly to the relevant action screen.

16. Screen Map

Area	Screens
Public	Campaign page; Ticket Request; Ticket Verification; Prize/Winner page
Seller	Home; Sell Tickets; Sale Success; My Tickets; Requests; Money Due; Share; Request More Inventory; Help
Team Manager	Team Dashboard; Family Progress; Reminder Composer
Admin	Command Center; Campaign Setup; Ticket Inventory; Sellers; Reconciliation; Correction Queue; Buyers; Prizes; Drawing; Reports; Audit Log; Users/Roles
Finance	Reconciliation Queue; Batch/Deposit Detail; Exceptions; Export
Director	Campaign Approval; Compliance Gate; Draw Lock/Unlock; Final Closeout

17. Low-Friction Wireframe Requirements

Seller Home - mobile

18. Screen-State Awareness

Object	States that should change the UI
Campaign	Draft / Ready / Active / Closing soon / Sales closed / Draw locked / Completed
Seller	No activity / Selling / Goal reached / Low inventory / Outstanding money / Fully reconciled
Ticket	Available / Assigned / Active / Void / Winner / Claimed
Request	New / Contacted / Ready / Fulfilled / Cancelled / Expired
Reconciliation	None / Partial / Reconciled / Exception
Prize	Unconfirmed / Ready / Winner assigned / Claimed
Draw	Not ready / Ready / Locked / Drawn / Certified

Empty states must always tell the user the next useful action. Avoid blank tables.

19. Canonical Data Model

Entity	Key fields
Organization	id, legalName, EIN reference internal-only, address, contacts, jurisdictionProfile
Campaign	id, orgId, name, status, dates, ticketPrice, goals, rulesVersion, jurisdictionMode
Prize	id, campaignId, title, description, value, source, possessionStatus, rank
Team	id, name, age/group
Participant	id, teamId, displayName, familyAccountId
SellerAccount	id, userId, campaignId, participantId, teamId, status
Ticket	id UUID, humanNumber, campaignId, sellerId, buyerId, status, reconciliationState, issuedAt, verificationTokenHash
Buyer	id, name, phone, email, consent metadata
TicketRequest	id, campaignId, sellerId, buyerContact, qty, state, timestamps
InventoryAllocation	id, campaignId, sellerId, ticketStart/ticketIds, allocatedAt, status
PaymentReceipt	id, sellerId, buyerId optional, amount, method CASH/CHECK, sellerConfirmedAt
ReconciliationBatch	id, campaignId, sellerId, cashAmount, checkAmount, receivedBy, timestamp, depositRef
Adjustment	id, type, amount/ticketId, reason, authorizedBy
DrawSnapshot	id, campaignId, ticketIds/hash, lockedAt, lockedBy, rulesVersion
Winner	id, snapshotId, ticketId, prizeId, drawMethod, drawnAt, certifiedBy
AuditEvent	id, actor, action, entityType, entityId, beforeHash/afterHash, timestamp, metadata

20. Canonical Enums & State Machines

CampaignStatus

DRAFT -> READY -> ACTIVE -> SALES_CLOSED -> DRAW_LOCKED -> COMPLETED. CANCELLED is terminal with explicit closeout rules.

TicketStatus

AVAILABLE -> ASSIGNED -> ACTIVE -> WINNER -> CLAIMED. VOID can be reached from ASSIGNED or ACTIVE only through authorized event; VOID is terminal except a linked replacement ticket may be issued.

ReconciliationState

NOT_APPLICABLE -> OUTSTANDING -> PARTIAL/OUTSTANDING -> RECONCILED. EXCEPTION may branch from OUTSTANDING/RECONCILED; WRITTEN_OFF requires director approval.

RequestState

NEW -> CONTACTED -> READY_FOR_HANDOFF -> FULFILLED. CANCELLED/EXPIRED terminal.

PrizeStatus

PLANNED -> READY -> AWARDED -> CONTACTED -> CLAIMED. FORFEITED only per approved campaign rules.

21. Technical Architecture & Services

Recommended architecture: responsive web/PWA front end + authenticated API + relational database + object/media storage + messaging provider. Avoid using the browser/local storage as the canonical financial/ticket ledger.

Service	Responsibilities
Auth/Identity	Users, sessions, MFA/OTP option, seller/admin identity.
Campaign Service	Campaign configuration, legal profile, status transitions.
Inventory Service	Ticket generation, allocation, atomic issuance.
Sales Service	Direct-payment confirmation, buyer creation, ACTIVE ticket transaction.
Delivery Service	Email/SMS ticket delivery and retries.
Verification Service	Opaque public ticket verification endpoint.
Reconciliation Service	Seller liability, turn-ins, batches, checks/cash, exceptions.
Request Service	Nonbinding buyer interest/share leads.
Drawing Service	Pool snapshot, lock, winner record/certification.
Prize Service	Prize readiness, winner claim/delivery.
Notification Service	Status-aware messaging and reminders.
Analytics Service	Club/team/seller dashboards and exports.
Audit Service	Append-only event stream and security logs.

Suggested API families

/campaigns, /sellers, /inventory, /tickets, /sales, /buyers, /requests, /reconciliation, /prizes, /draws, /winners, /reports, /audit, /public/verify/{token}

22. Atomic Sale Transaction Requirements

MOST IMPORTANT ENGINEERING RULE

Issuing multiple tickets must be one atomic server transaction. Never issue some tickets and fail halfway.

POST /sales/issue - conceptual sequence

26. Authenticate seller and verify ACTIVE campaign.
27. Validate quantity > 0 and inventory >= quantity.
28. Validate buyer contact and payment method CASH/CHECK.
29. Require sellerReceivedPayment=true.
30. Lock/select assigned AVAILABLE ticket rows.
31. Create buyer/payment receipt record.
32. Transition selected tickets to ACTIVE and attach buyer/seller/timestamp.
33. Create audit events.
34. Commit transaction.
35. After commit, enqueue delivery. Delivery failure does not invalidate ticket.

Idempotency

Every issue request must carry an idempotency key generated by the client. Retrying after poor mobile signal must return the original sale/tickets, not create duplicates.

23. Security, Privacy & Data Protection

Control	Requirement
Transport	HTTPS only; HSTS in production.
Authentication	Secure managed identity; admin MFA recommended.
Authorization	Server-side RBAC on every sensitive endpoint.
PII	Encrypt at rest where supported; minimize public exposure.
Verification tokens	Random high-entropy token; store hash if practical.
Sequential ticket numbers	Never use as sole authorization/verification secret.
Audit	Append-only write log for money/ticket/draw/admin events.
Rate limiting	Public request/verification endpoints.
Anti-abuse	CAPTCHA or adaptive bot protection on ticket request forms if needed.
Backups	Automated database backups + restore test.
Retention	Document buyer/contact retention and deletion policy.
Exports	Admin-only; log export event.
Secrets	Server-side only; never in client bundles.

24. Fraud, Error & Abuse Controls

Risk	Control
Seller issues without payment	Explicit confirmation, inventory cap, seller liability, anomaly reporting.
Duplicate tap/network retry	Idempotency key + atomic transaction.
Seller edits sold ticket	Not allowed; correction request -> admin void/reissue.
Fake verification page	Official domain + QR token + branded verification result.
Ticket number guessing	Opaque verification token separate from human number.
Admin manipulation	Audit trail, reason-required actions, elevated permission.
Money discrepancy	Reconciliation exception workflow; never hide delta.
Bounced check	Payment exception record + director policy.
Mass fake requests	Rate limit/CAPTCHA; requests do not consume permanent inventory.
Lost buyer email/SMS	Ticket lookup and resend; ticket remains ACTIVE.
Draw tampering	Immutable snapshot/hash, two-person certification, full event log.
Clock/timezone errors	Server timestamps UTC; display campaign timezone explicitly.

25. Analytics, Reports & Operational Intelligence

Club dashboard metrics

- Active ticket face value vs reconciled cash/check.
- Ticket count sold, available, assigned, voided.
- Participation rate by team/family.
- Average tickets sold per active seller.
- Goal attainment and projected pace - labeled as informational, not guaranteed.
- Outstanding seller funds aging.
- Inventory utilization and request-to-sale conversion.
- Delivery success/failure.

Reports

Report	Audience
Ticket ledger	Admin/Auditor
Seller liability report	Admin/Finance
Reconciliation batches	Finance
Team/family progress	Managers/Admin
Buyer/ticket delivery	Admin
Voids/adjustments	Director/Auditor
Prize/winner closeout	Admin/Director
Campaign summary	Board/Leadership
Audit export	Auditor/Legal

26. Integrations

Integration	Use	v1?
Email provider	Ticket delivery, reminders, admin alerts	Yes
SMS provider	Ticket link/reminders; optional based on cost/consent	Optional v1
QR generator	Seller share + ticket verification	Yes
Accounting export	CSV/QBO-friendly reconciliation export; no raffle checkout	Yes - export
Identity	Seller/admin authentication	Yes
Cloud storage	Prize images, campaign assets, signed exports	Yes
Stripe	Do not use for raffle ticket checkout in Texas CREA mode	No
Payment links	Do not use for raffle tickets in Texas CREA mode	No

27. Mobile, Accessibility, Performance & Resilience

Mobile acceptance

- Core seller flow works at 360px width and common iPhone/Android sizes.
- Primary CTA stays reachable without excessive scroll.
- Numeric quantity and total are large and readable outdoors.
- Success screen shows ticket numbers even if delivery provider is slow.

Accessibility

- WCAG-oriented labels, focus states, keyboard navigation and status text not conveyed by color alone.
- QR always accompanied by readable ticket number and verification URL button.
- Error messages identify field and recovery action.

Resilience

- Sale issuance requires server confirmation before success.
- Client may queue drafts, but never display ACTIVE until server commits ticket issuance.
- Network retry uses idempotency key.
- Delivery is asynchronous and retriable; issuance does not depend on message provider uptime.

28. Implementation Phases

Phase	Scope	Exit criteria
0 - Foundation	DB schema, auth, campaign, roles, audit framework	Admin can create DRAFT campaign and users.
1 - Core Sale	Inventory, seller home, direct sale, ACTIVE ticket, email delivery, verification	End-to-end direct sale works with no duplicates.
2 - Reconciliation	Seller liability, turn-in screen, partial reconciliation, exceptions	Finance can reconcile seller funds cleanly.
3 - Sharing	Public campaign/share page, nonbinding requests, seller request inbox	Request -> direct handoff -> active ticket loop works.
4 - Team/Club Ops	Team dashboards, targets, reminders, inventory requests	Hundreds of sellers manageable without spreadsheets.
5 - Drawing/Prizes	Sales close, draw snapshot, winner, prize claim	Campaign can close and produce audit package.
6 - Automation/Polish	30-day messaging, analytics, exports, mobile/PWA refinements	Ready for live pilot.

RECOMMENDED PILOT

Pilot internally with 5-10 families using test tickets and $0/non-cash simulated payments before live launch. Then run a controlled small seller cohort before club-wide activation.

29. Acceptance Criteria & E2E Tests

Test	Pass condition
Sale speed	Authenticated seller can issue 1-5 tickets in <20 seconds after entering buyer contact under normal network conditions.
Immediate confidence	Buyer receives screen/email showing ACTIVE immediately after server commit; no pending-validation language.
No online payment	Texas CREA campaign contains no card/ACH/payment-link checkout path.
Atomic inventory	Multi-ticket sale either issues all requested tickets or none.
Idempotency	Double tap/retry does not create duplicate tickets.
Inventory cap	Seller cannot exceed assigned available inventory.
Money separation	Ticket remains ACTIVE while reconciliation state is OUTSTANDING.
Partial turn-in	Admin can reconcile part of seller liability and remainder calculates correctly.
Void/reissue	Admin can void active ticket with reason and issue replacement; original remains in audit history.
Verification	Public QR verifies ticket without exposing buyer PII.
Request safety	Public request creates no ticket, no payment, and no permanent inventory consumption.
Sales close	After configured close, no seller can issue new tickets.
Draw lock	Eligible pool snapshot cannot change after lock without privileged unlock event.
Winner	Winning ticket traces to buyer, seller, team, prize and snapshot.
Audit	All money/ticket/draw/admin state changes are attributable to actor and timestamp.
Permissions	Seller cannot access another seller financial detail; manager cannot reconcile unless separately privileged.
Mobile	Seller sale and buyer ticket pass at 360px viewport without horizontal scrolling.
Delivery retry	Email/SMS failure is retryable and does not duplicate ticket issuance.
Export	Admin can export ticket ledger and reconciliation report.
Legal config	Ticket generated contains configured required operator, address, price, prize descriptions and draw date.

Supporter Experience acceptance criteria

Buyer receives an ACTIVE ticket confirmation within the normal message-delivery window immediately after server-confirmed issuance.

Verification QR/link resolves to official ticket status without exposing buyer PII.

Supporter Wallet shows all campaign tickets for the verified buyer and updates after draw completion.

After draw certification, every eligible non-winning supporter receives exactly one unique 25% Aspire Fan Wear code.

Reward code cannot be issued twice for the same supporter/campaign, even if notification jobs retry.

Reward expiration, storefront link and eligibility are campaign-configurable.

Reward redemption can be imported/synced and appears in campaign analytics.

No buyer-facing screen displays reconciliation state or seller money-outstanding language.

30. Admin Operating SOP

Before launch

36. Legal/counsel signoff complete.
37. Campaign dates and drawing date entered.
38. Ticket price locked.
39. Prize readiness documented.
40. Seller roster/team assignments imported.
41. Inventory generated and default allocations set.
42. Buyer-facing ticket preview approved.
43. Test sale/reconciliation/draw run completed.

44. Campaign switched READY -> ACTIVE by authorized director.

During campaign

- Reconcile turn-ins regularly; use queue, not spreadsheets.
- Resolve correction requests within one business day when possible.
- Monitor outstanding seller funds and delivery failures.
- Keep prize readiness current.

Closeout

- Close sales at configured deadline.
- Resolve material exceptions.
- Lock draw pool and export snapshot/audit record.
- Record winners, claims and prize delivery.
- Export final financial/ticket closeout package and mark campaign COMPLETED.

31. Seller Instructions - What Parents/Players Should See

HOW TO SELL

1. Sell the ticket directly to the buyer.
2. Collect cash or check.
3. Open SELL TICKETS.
4. Enter buyer name + phone/email + quantity.
5. Confirm you received payment.
6. Tap PAYMENT RECEIVED - ISSUE TICKETS.
7. Buyer gets ACTIVE tickets immediately.
8. Turn collected money in to Aspire Sports Group by the announced turn-in schedule.

What not to do

- Do not issue a ticket before receiving direct payment.
- Do not accept online/card/payment-link payment for raffle tickets through the app.
- Do not promise a ticket request is a completed sale.
- Do not edit or reuse an issued ticket number.
- If you make a mistake, use Request Correction.

32. Deployment, Data Migration & Operational Readiness

Environment separation

- Development, staging and production must have separate databases, messaging credentials and ticket number namespaces.
- Never use production ticket numbers in staging.

Seed/import

- Teams/players/families may be imported by CSV for pilot.
- Normalize duplicate contacts before campaign activation where practical.

Observability

- Structured logs for failed issuance, delivery, reconciliation and draw events.
- Alert on repeated sale errors, inventory exhaustion spikes, messaging failures and unauthorized access attempts.

Backup/restore

- Automated daily backups minimum during active campaign; test restore before live launch.
- Generate downloadable closeout snapshot after sales close and after draw certification.

33. Productization & Aspire Proprietary Value

This raffle system can become more than a one-off Aspire fundraiser. Its defensible value comes from the operating workflow, compliance-aware campaign mode, digital ticket ledger, seller custody/reconciliation engine and low-friction club/team/family orchestration.

Asset	Potential proprietary value
Offline-payment / instant-digital-ticket workflow	Distinctive UX pattern for jurisdictions where online raffle checkout is restricted.
Seller liability engine	Tracks money held by distributed volunteer sellers without invalidating buyer tickets.
Jurisdiction profile	Feature flags/rules that change campaign behavior by legal mode.
Ticket/audit ledger	End-to-end immutable provenance from inventory -> seller -> buyer -> reconciliation -> drawing.
Campaign automation	Status-aware reminders driven by actual seller/family conditions.
Club hierarchy analytics	Club -> team -> family/player attribution and engagement.
Drawing closeout package	Repeatable audit/report package for governance and donor confidence.
Operational playbook	Distribution, correction, reconciliation and drawing SOP embedded in product.

IP STRATEGY NOTE

Protect brand/product names with trademark review, original software/content with copyright, sensitive algorithms/workflows/data practices as trade secrets where appropriate, and maintain dated version history. Patentability requires specialist counsel and should not be assumed.

34. Future Extensions - Not Required for v1

- Additional jurisdiction profiles with counsel-approved rules.
- Wallet passes (Apple/Google) for buyer tickets.
- OCR/check image capture for finance convenience, if privacy/security supports it.
- Multi-campaign/multi-club SaaS architecture.
- Sponsor placement and prize-donor analytics.
- Advanced anomaly detection for seller issuance vs turn-in behavior.
- Accounting connector for reconciled batch export.
- Optional digital draw ceremony/live display once legally/operationally approved.
- Family incentive engine and non-cash club rewards.
- Volunteer shift/turn-in event scheduling.

DO NOT BUILD YET

Online raffle ticket checkout in Texas CREA mode. Keep this disabled unless a future legal review establishes a clearly permitted path for the specific organization/campaign.

35. Developer Build Checklist

☐ Confirm final production legal name: Aspire Sports Group.
☐ Campaign dates, sales close and drawing date remain configurable/TBD.
☐ Ticket price remains configurable and locks at activation.
☐ Implement jurisdictionMode=TEXAS_CREA_OFFLINE_PAYMENT.
☐ No online raffle checkout/payment buttons in that mode.
☐ Implement server-side RBAC and audit events before live ticket sales.
☐ Pre-generate human ticket inventory + UUID IDs.
☐ Atomic/idempotent issue transaction.
☐ Buyer ACTIVE status immediately after seller confirms direct payment.
☐ Separate TicketStatus from ReconciliationState.
☐ Email delivery + verification QR/token.
☐ Public request flow is nonbinding and payment-free.
☐ Seller inventory cap + request-more workflow.
☐ Reconciliation supports cash/check, partial turn-in, exceptions.
☐ Admin void/reissue requires reason; no destructive editing.
☐ Sales close hard-stops issuance.
☐ Draw snapshot/lock is immutable and auditable.
☐ Prize readiness and winner claim flow.
☐ Mobile QA at 360px and common tablet/desktop widths.
☐ Backup/restore and audit export tested.
☐ Run full end-to-end staging simulation before live campaign.
☐ Obtain final Texas legal review of campaign rules/ticket wording/digital issuance before production activation.

☐ Build Supporter Wallet with ticket grouping, countdown, prize/impact content and verification.

☐ Immediate thank-you email/SMS includes ACTIVE ticket numbers and official verification action.

☐ Implement post-draw 25% Aspire Fan Wear reward for eligible non-winning supporters.

☐ Generate one unique single-use reward code per supporter per campaign with configurable expiry.

☐ Add fan-wear storefront deep link and optional coupon/redemption integration.

☐ Add reward delivery, click and redemption analytics.

☐ Keep buyer-facing ticket status separate from internal reconciliation state in all UI and messaging.

36. Decision Log & Source Notes

Locked product decisions

Decision	Status
Legal operator name	Aspire Sports Group
Texas operating mode	No online raffle ticket checkout
Ticket format	Digital
Buyer ticket status	ACTIVE immediately after seller confirms direct payment
Payment methods in core flow	Cash / Check
Back-office status	Seller funds OUTSTANDING -> RECONCILED
Buyer pending validation	Removed
Inventory	Pre-generated and allocated to sellers
Corrections	Void/reissue, never destructive edit
30-day campaign dates	TBD - configurable

Decision	Status
Drawing date	TBD - configurable
Prize policy	No cash; Aspire will not use the previously discussed $1,000 general-purpose gift card

Primary legal source reviewed

Texas Office of the Attorney General - Charitable Raffles and Casino/Poker Nights. The page states, among other things, that qualified 501(c) nonprofits in existence at least three years may conduct raffles; CREA organizations may conduct up to four raffles per year; online/statewide sale concerns apply; required ticket information is specified; and cash prizes are prohibited. Always re-check current law before each campaign.

https://www.texasattorneygeneral.gov/divisions/charitable-trusts/charitable-raffles-and-casinopoker-nights

FINAL IMPLEMENTATION RULE

Treat this blueprint as the product/engineering source of truth. Treat Texas counsel as the final authority on launch legality and campaign wording. If counsel changes a legal requirement, update the jurisdiction profile and preserve the rest of the workflow whenever possible.

Version 1.1 decision - Supporter Experience Layer

Aspire approved a guaranteed post-draw thank-you for eligible non-winning buyers: 25% off Aspire Fan Wear. The production design uses unique single-use codes, a Supporter Wallet, immediate buyer thank-you/verification and post-draw reward analytics. This reward is separate from raffle entry/payment and should be included in final legal/compliance review before launch.

37. Unified UX Simplification Layer - Buyer, Seller & Admin

Purpose. The Raffle Hub must hide operational complexity from every user. Buyer, parent/seller, and admin experiences use the same underlying records, but each role sees only the information and actions needed at that moment. The product should be understandable without training and usable primarily from a phone.

UX NORTH STAR

One screen = one job. One primary action = one obvious next step. Scan when possible. Tap when necessary. Type only when unavoidable.

37.1 Three experience layers

Experience	What the user should feel	Primary actions	Complexity hidden
Buyer	Trust: my ticket is real, active and easy to verify.	View ticket, verify, view drawing/prizes, claim thank-you reward.	Inventory, seller liability, reconciliation, audit records.
Parent / Seller	Speed: I can sell and share without learning software.	Sell tickets, share link/QR, fulfill requests, see progress, see money to turn in.	Ticket numbering, ledger logic, campaign configuration, reconciliation detail.

Admin	Control without spreadsheet work.	Resolve exceptions, reconcile money, distribute inventory, monitor campaign, close drawing.	Technical states, duplicate prevention, audit/event plumbing unless drilling into an exception.

37.2 Universal visual rules

- Mobile-first. Buyer and seller flows are designed for a 360-430 px phone viewport before desktop refinement.
- One dominant primary button per screen. Secondary actions are visually quieter and never compete with the next step.
- Use plain language. Never expose database/state-machine terms to buyers or normal sellers.
- Important values are big and scannable: tickets sold, amount due, drawing date, ACTIVE status, unresolved exceptions.
- Use progressive disclosure. Advanced details appear only after View details / More actions.
- Keep forms short. Prefill campaign, seller, team, ticket price and ticket allocation from context.
- Use status words plus icons, not color alone. Green = complete/active; amber = attention; red = blocked/exception.
- Avoid dense tables on mobile. Use cards with a detail drawer. Tables may be used on desktop admin views.
- No user should need to remember ticket numbers, calculate totals, or re-enter data the system already knows.
- Every irreversible action uses a clear confirmation and leaves an audit record.

38. Buyer UX - Trust First, Minimal Choices

The buyer experience should resemble a polished event ticket or purchase confirmation, not an administrative raffle portal. The buyer does not need an account for the normal flow; secure magic links or verification codes may be used to access a wallet.

38.1 Buyer ticket screen - above the fold

- Aspire Sports Group logo/name and campaign name.
- Large status: ACTIVE - ENTERED IN DRAWING.
- Ticket number(s) or grouped ticket count.
- Drawing date and countdown.
- Primary button: VERIFY MY TICKET.
- Short thank-you: “Thank you for supporting Aspire Sports Group.”
- No reconciliation or seller-payment language anywhere.

38.2 Buyer screen hierarchy

Priority	Content	Design behavior
1	Ticket is ACTIVE	Largest trust signal on page.
2	Drawing date	Always visible without scrolling on standard phone.
3	Verify ticket	Primary CTA.
4	Prize preview	2-4 concise visual prize cards; View all if needed.
5	Impact / player supported	One concise card, not a paragraph wall.
6	My Tickets wallet	Shows all current campaign tickets in one place.
7	Help/contact	Simple footer option; never dominates screen.

38.3 Buyer communication sequence

45. Immediately after seller confirms payment: ACTIVE ticket email/SMS with ticket number(s), drawing date and Verify Ticket link.
46. Mid-campaign only if useful: one optional drawing reminder; do not over-message buyers.
47. Before drawing: concise reminder with date/time and official verification link.
48. After drawing: outcome notice and official winning-ticket information.
49. Eligible non-winning supporter: unique 25% off Aspire Fan Wear thank-you reward with expiry and claim link.

BUYER COPY RULE
Never say “pending validation,” “unreconciled,” “funds outstanding,” or “seller liability.” The buyer sees ACTIVE once the authorized seller confirms physical payment received.

39. Parent / Seller UX - Sell in Under 20 Seconds

The seller interface should feel like a small set of large task cards. Normal sellers should not see campaign configuration, ticket lifecycle detail, buyer databases, accounting reports or drawing administration.

39.1 Seller home - target composition

- Progress: 11 of 20 sold.
- Raised: $220.
- Money to turn in: $60.
- Primary CTA: SELL TICKETS.
- Secondary CTA: SHARE MY LINK / QR.
- Compact Request Inbox badge when a supporter has requested tickets.
- Five-line How It Works card: Sell in person -> collect cash/check -> tap Payment Received -> buyer gets ticket -> turn money in.

39.2 Sell Tickets flow

50. Open Sell Tickets.
51. Enter/select buyer name + phone/email; choose quantity. Ticket price and total calculate automatically.
52. Collect physical cash/check.
53. Tap PAYMENT RECEIVED - ISSUE TICKETS.
54. Success screen appears immediately with ACTIVE ticket count, buyer delivery status and seller balance update.

Target interaction time: 15-20 seconds after payment is physically received. Buyer contact entry should be the only normal typing required.

39.3 Seller safeguards without friction

- Display “Only tap after you have received cash/check” immediately above the issue button.
- If quantity exceeds seller inventory, show Request More Tickets instead of an error code.
- If delivery fails, ticket remains ACTIVE and seller sees “Buyer message not delivered - resend or copy link.”
- Mistakes are corrected with a guided “Report a problem” flow; sellers do not edit ACTIVE ticket records.
- Remind sellers of money due using a friendly task card, not accounting terminology.

40. Admin UX - Control Center Without Operational Friction

Admin should be powerful but not complicated. The admin home is an exception-driven command center: show what requires attention first, then campaign health, then deeper reports. The admin should not have to hunt across modules or maintain external spreadsheets.

40.1 Admin home - top of screen

- Campaign health: Verified/received funds, reported seller collections, ticket sales, goal progress, days remaining.
- Action Needed queue: unreconciled seller funds, failed buyer delivery, inventory requests, void requests, check exceptions, unresolved drawing blockers.
- Three quick actions: RECONCILE MONEY, ASSIGN TICKETS, VIEW CAMPAIGN.
- No more than 6 headline metrics above the fold.

40.2 Admin navigation

Area	Admin job	What should be visible first
Overview	Know campaign health	Goal, collected, outstanding, tickets, participation, action queue.
Reconcile	Receive cash/check	Seller name, expected amount, amount turned in, variance, confirm.
Tickets	Control inventory	Available, assigned, active, void; search by ticket/seller/buyer.
People / Teams	Manage participation	Team progress, seller status, contact and assignment actions.
Requests	Resolve demand	Open buyer requests and seller fulfillment status.
Prizes	Maintain official prize data	Prize card, value/source, winner status, delivery status.
Drawing	Close and certify	Readiness checklist, blockers, lock, draw, winner record.
Messages	Communicate intelligently	Audience filters and preview; no blanket spam by default.
Reports	Audit/export	Reconciliation, ticket register, seller balances, winners, reward redemption.

40.3 Reconciliation should take under 30 seconds

55. Admin searches/scans seller.
56. System displays seller-collected amount, previously turned-in amount, remaining due and associated active tickets.
57. Admin enters cash amount and check amount received.
58. System calculates expected vs received and shows MATCH or VARIANCE.
59. If MATCH: one tap RECONCILE. If VARIANCE: guided reason options and optional note.
60. Seller balance updates instantly and audit event is written.

40.4 Exception-driven design

Admins should manage exceptions, not manually review every successful transaction. A clean campaign should largely run itself. Normal sales auto-post; normal buyer messages auto-send; ticket allocations update automatically; reminders target only users who need them.

- Failed buyer delivery -> Resend / Copy ticket link.
- Unreconciled funds -> Open seller and reconcile.
- Inventory request -> Approve quantity or decline with note.
- Void request -> Review reason, approve, replacement option.
- Bounced/invalid check -> Guided exception record and ticket/admin action.
- Drawing blocker -> Exact reason and direct Fix button.

40.5 Admin safeguards

- Role-based permissions: campaign owner/admin vs team manager vs seller.
- Confirmation for void, campaign lock, draw certification, reward revocation and destructive actions.
- Every financial/ticket mutation has actor, timestamp, old state, new state and reason.
- Search is global: ticket number, buyer, seller, team, phone/email.
- CSV export is available, but should be a backup/reporting tool - not required to operate the fundraiser.
- Critical admin actions work comfortably on tablet and phone, not desktop only.

41. Visual System & Component Guidance

- Use Aspire brand consistently but prioritize readability over decorative graphics.
- Use generous whitespace and large tap targets (minimum 44x44 px).
- Primary CTA uses the strongest brand emphasis; destructive actions are visually distinct and never adjacent to the primary CTA.
- Status cards use icon + word + short explanation.
- Use skeleton/loading states instead of blank screens during network activity.
- Success states should be celebratory but brief: checkmark, ticket issued, next step.
- Error messages must explain what happened and what the user can do next.
- Use concise modal sheets on mobile instead of deep navigation for simple confirm/correct flows.
- Keep buyer/seller typography large enough for quick outdoor use at fields/events.

42. UX Acceptance Criteria

- A first-time buyer can understand ticket status, drawing date and how to verify within 5 seconds of opening the ticket page.
- A seller can issue a normal sale in 20 seconds or less after receiving physical payment.
- A seller never needs to calculate ticket totals or type ticket numbers.
- A seller sees money-to-turn-in as a single clear number and does not see internal ledger terminology.
- An admin can reconcile a matching seller turn-in in 30 seconds or less.
- Admin home identifies unresolved exceptions without requiring navigation to multiple modules.
- No normal buyer screen exposes reconciliation state.
- No normal seller screen exposes technical ticket state-machine details.
- No core mobile task requires horizontal scrolling.
- All critical actions have keyboard/screen-reader labels and color is never the only status signal.
- Every screen has a clear empty state and a clear success state.
- The system remains usable if email/SMS delivery fails because tickets can be resent or opened via secure link.

43. Developer Implementation Sequence for UX

61. Freeze the canonical data/state model already defined in this blueprint; do not create alternate buyer/seller/admin records for the UX layer.
62. Build shared responsive design tokens and components: status badge, metric card, primary CTA, progress bar, action queue item, ticket card, confirmation sheet.
63. Implement Buyer Ticket + Verification + Wallet first.
64. Implement Seller Home + Sell Tickets + Share/Requests next.
65. Implement Admin Overview + Reconciliation + Action Needed queue next.
66. Connect notifications and the post-draw 25% Fan Wear thank-you reward.
67. Run usability QA on phone widths before adding decorative enhancements.
68. Then refine desktop/tablet admin layouts while preserving the same task hierarchy.

DEVELOPER STOP RULE
If a parent, buyer or normal admin needs a written training manual to complete the core flow, simplify the interface

before adding more features.

44. Version 1.2 Decision - Simplicity Across All Roles

Version 1.2 formally makes low-friction UX a product requirement for buyer, seller/parent/player and admin. Buyer and seller experiences are intentionally minimal. Admin remains powerful but is designed around exceptions and guided workflows rather than manual bookkeeping. These rules apply to the existing Aspire Raffle Hub upgrade and should be treated as acceptance criteria, not optional visual polish.
